Codeforces LeetCode Portfolio

EDUCATION

Delhi Technological University <i>B.Tech in Software Engineering – CGPA: 8.11</i>	Aug 2023 - Jun 2027 <i>New Delhi, India</i>
J N International School <i>Class XII (CBSE) – 80.8%</i>	Apr 2021 - Mar 2023 <i>Delhi, India</i>
Vidya Niketan School <i>Class X (CBSE) – 95.33%</i>	Apr 2019 - Mar 2021 <i>Faridabad, India</i>

EXPERIENCE

Rolewize <i>Software Development Engineer Intern</i>	Jun 2026 - Jul 2026 <i>Remote</i>
• Orchestrated the development of JWT-authenticated REST APIs (Node.js, PostgreSQL) to process AI resume parsing, automating data extraction workflows. • Optimized backend latency by integrating Redis caching with SHA-256 hashing and 24-hour TTL, eliminating duplicate LLM API calls. • Architected webhook endpoints with HMAC-SHA256 verification, dual-layer Redis/Postgres idempotency, and BullMQ workers using 3-attempt retry. • Engineered multipart resume uploads to AWS S3 with MIME validation and 15-minute pre-signed URL generation.	

PROJECTS

CodeSync AI (IDE) <i>Node.js, React.js, Socket.IO</i>	Mar 2026 - May 2026 Live GitHub
• Spearheaded an IDE in React.js and Socket.IO, establishing synchronized multi-user code editing with low latency. • Directed a remote code execution engine via Docker sandboxes with CPU limits, utilizing a Judge0 API fallback to evaluate 3 languages. • Integrated the Gemini API to deliver automated AI code reviews, detecting bugs and generating precise code fixes. • Structured secure user authentication and persistent codebase storage using JWT and MongoDB, preventing data loss during collaborative sessions.	
QueueFlow (Job Queue) <i>Redis, PostgreSQL, Node.js</i>	Nov 2025 - Jan 2026 Live GitHub
• Engineered a distributed job queue system from scratch using Node.js, Redis, and PostgreSQL, stress-testing 1,000+ concurrent background tasks across 10+ horizontal worker nodes with zero data loss. • Designed a 3-tier priority execution engine utilizing atomic Redis LPUSH and BRPOP primitives, ensuring O(1) enqueue/dequeue times while bypassing inefficient database polling loops. • Implemented a dynamic exponential backoff system (2s, 4s, 8s) utilizing Redis sorted sets (ZSET) and durable Postgres crash recovery, ensuring 100% fault tolerance against worker node failures. • Built a real-time React dashboard using WebSockets and Redis Pub/Sub, eliminating HTTP polling overhead to achieve real-time state synchronization across queued, processing, and failed job lifecycles.	

TECHNICAL SKILLS

Languages: C, C++, JavaScript (ES6+), Python, SQL, HTML, CSS
Frameworks & Libraries: React.js, Node.js, Express.js, Tailwind CSS, Socket.IO, Zod
Databases & Cloud: PostgreSQL, MongoDB, Redis, AWS (S3), Docker
Tools & Practices: Git, GitHub, Linux, RESTful APIs, WebSockets, JWT

ACHIEVEMENTS

- **Competitive Programming:** Attained **Knight** status (Top 4%, Rating: 1924) on LeetCode and **Specialist** (Rating: 1411) on Codeforces.
- **Global Rankings:** Captured **Global Rank 892** in LeetCode Weekly 504 and **Global Rank 1,484** in Codeforces Div. 2 out of 30,000+ participants.
- **Algorithmic Problem Solving:** Solved **1,500+** DSA and CP problems across LeetCode and Codeforces platforms.
- **Hackathons & Competitions:** Selected for the **Smart India Hackathon (SIH) 2025** internal round and the **Flipkart GRiD 8.0** Software Development Track.
- **Academic Excellence:** Earned an **A+ Grade** in core computer science fundamentals including **Operating Systems (OS)**, **DBMS**, and **Computer Networks (CN)**.
- **Leadership & Volunteering:** Mentored **400+** students in C++ programming at the **RoundTable** community, and volunteered at **INTENSE** (Calisthenics), leading and organizing community fitness initiatives.

COURSEWORK

- | | | |
|--------------------------------|-------------------------------------|---------------------|
| • Data Structures & Algorithms | • Object-Oriented Programming (OOP) | • Operating Systems |
| • Database Management | • Computer Networks | • System Design |
